

Ozone by Grenof is revolutionising the mains cleaning and mains disinfection industry. With more Local Government authorities and water utilities reducing their use of harmful super chlorination, Ozone by Grenof is quickly becoming the preferred alternative across the country.

Grenof use Ozone for new mains disinfection and have developed a process to use Ozone as an effective way to clean and disinfect existing water mains.

## CLEANS & DISINFECTS

Proprietary technology cleans and provides a higher level of disinfection than any other product on the market

## COST SAVING

Savings of 50% or more compared to alternative options

## TIME SAVING

Same day connections

## ECO FRIENDLY

Removes the need to use carcinogenic chemicals in the network

## 24/7 AVAILABILITY

Our team are available 24 hours a day, 7 days a week to minimise customer interruptions

## TIME SAVED

OZONE

24 HOURS

Ozone is a faster and more effective method of mains cleaning and disinfection compared to traditional methods

Ozone is an incredibly strong oxidant with the added advantage of breaking down rapidly into harmless oxygen, creating an environmentally friendly solution.

Grenof's proprietary systems create true third-party validation for disinfection. This means customers are assured that true disinfection and cleaning has been successfully achieved.

Experienced staff work with the customer to plan and execute a program of works to ensure customer interruption is minimised.

With Grenof's unique mobile ozone trailer design, previously inaccessible areas are now easily accessed giving Grenof the ability to support more customers.
